

December 19, 2025

To faculty and students

Director of the Information & Communications  
Kazuya Takeda

### Updating Servers for Mail Gateway (University-Wide Mail Security System)

We have been using "Kaspersky Security for Linux Mail Server (KLMS)" as university-wide mail security system, which filters attached malware and limits number of spam mails. We are planning to update servers for KLMS. Details are as follows:

#### 1. Date

> Starting new servers: Wednesday, December 24, 2025

> Stopping old servers: Wednesday, January 14, 2026

Depending on status of external mail servers, some servers may send mails through old servers even if we started new servers.

#### 2. Notice

The new servers will use "Kaspersky Secure Mail Gateway (KSMG)."

The new servers give difference types of modifications on headers when it detects spam.

> old servers : "X-KLMS-AntiSpam-Status: spam"

> new servers : "X-KSMG-AntiSpam-Status: spam"

The new servers give same types of modifications on mail subject when it detects malware or spam. Please check below page if you want to see detail.

> About University-Wide Mail Gateway (Japanese only)

<https://www.icts.nagoya-u.ac.jp/nu-only/ja/services/nice/anti-spam.html>

The mail gateway service will not stop by this updating.
