To Deans

Director, Information Technology Center
Kensaku Mori

Notice of temporary unavailability of internet connection with SINET update

Thank you for your continuous cooperation to maintenance of campus-wide information network.

The Internet connection of Nagoya University is via Science Information NETWORK (SINET) provided / operated by National Institute of Informatics. The next generation SINET (SINET6) will start in April 2022 so that we have to newly create a connection line between Nagoya University and SINET6 and migrate to it. The Internet accesses become temporary unavailable because of this operation. Details are as follows :

1 Date and time:

Monday, March 14, 2022, 7:00-8:00

2 Influences:

The Internet connection stops for 5 minutes at the most.

3 Notes:

- The campus-wide LAN (NICE), Jimu LAN (Administration system network), the campus-wide wireless LAN (NUWNET) including "eduroam", and SINET L2/L3 VPN services will affect above influences.
- If you need a network connection to the Internet during above time, please prepare a backup line such as a mobile phone line.
